

Curriculum Vitae

Nengjun Yi, Ph.D.

Professor
Sir David Cox Endowed Professorship
Section on Statistical Genetics
Department of Biostatistics
The University of Alabama at Birmingham
Birmingham, AL 35294-0022

Phone: (205) 934-4924
Fax: (205) 975-2540
Email: nyi@uab.edu

EDUCATION AND TRAINING

- Postdoctoral Research Associate, Statistical genetics/genomics, University of California at Riverside, July 1998 - December 2001. (With Prof. Shizhong Xu).
- Ph.D. July 1996. Quantitative and Population Genetics, Nanjing Forestry University, P. R. China.
- M.S. July 1988. Biostatistics, Zhejiang University, P. R. China.
- B.S. July 1983. Mathematics, Shaoyang Normal University, P. R. China.

CONTINUING EDUCATION

- Short course on Bayesian Modeling, Inference and Prediction. Presenter: David Draper, University of California at Santa Cruz. March 18th, 2005.
- Bayesian statistics and Markov chain Monte Carlo algorithms in genetics, Iowa State University, June 20-30, 2000.
- Advanced SAS course, Department of Statistics, Beijing University, P. R. China, July 20-August 2, 1995.
- Mathematics, Department of Mathematics, Hunan Teacher University, P. R. China, July 1985-July 1986.

CURRENT APPOINTMENTS

- Professor (with tenure), the Section on Statistical Genetics, Department of Biostatistics, University of Alabama at Birmingham, September 2012 – present.
- The Sir David Cox Endowed Professorship in Biostatistics in the Department of Biostatistics in the School of Public Health, University of Alabama at Birmingham. April 2011 – present.
- Senior Scientist of Nutrition Obesity Research Center (NORC), University of Alabama at Birmingham, June 2003 - present.
- Senior Scientist of the UAB Comprehensive Cancer Center, the Cancer Control and Population Science Program, University of Alabama at Birmingham, 2009 - present

PREVIOUS APPOINTMENTS

- Associate Professor (with tenure), the Section on Statistical Genetics, Department of Biostatistics, University of Alabama at Birmingham, August 2005 – September 2012.
- Assistant Professor of Biostatistics and Statistical Genetics, the Section on Statistical Genetics, Department of Biostatistics, University of Alabama at Birmingham, July 2004-August 2005.
- Research Assistant Professor of Biostatistics and Statistical Genetics, the Section on Statistical Genetics, Department of Biostatistics, University of Alabama at Birmingham, May 2002-July 2004.
- Assistant Professor of Biostatistics and Statistical Genetics, Creighton University, January 2002-May 2002.
- Postdoctoral Research Associate, Statistical genetics/genomics, University of California, Riverside, July 1998-December 2002. (With Prof. Shizhong Xu).
- Associate Professor of Statistics and Genetics, Nanjing Forestry University, P. R. China, April 1996-June 1998.
- Assistant Professor of Mathematics, Nanjing Forestry University, P. R. China, August 1988-March 1996.
- Teacher of Mathematics, Chengbu High School, Chengbu, Hunan Province, P. R. China, August 1983-July 1985.

HONORS AND AWARDS

- 2014 Best Paper Award by Science Unbound Foundation, USA.
- The Sir David Cox Endowed Professorship in Biostatistics in the UAB Department of Biostatistics in the School of Public Health, appointed by The University of Alabama System Board of Trustees in April 8, 2011.
- The 2011 Graduate Dean's Award for Excellence in Mentorship, University of Alabama at Birmingham
- On the basis of my substantial service to peer review at the National Institutes of Health, I have been given special dispensation from NIH to submit grants at any time without respect to deadline from OCTOBER 01, 2010 to SEPTEMBER 30, 2011.
- CME Credit for JAMA Review. My peer review has met the criteria of quality and timeliness required to claim credit. 3/22/2010.
- Birmingham Top Ten Outstanding Chinese, Awarded by Birmingham Chinese Association. July 2009.
- The 2007 recipient of the Distinguished Faculty Investigator Award, School of Public Health, University of Alabama at Birmingham
- 2004 Named New Investigator, Clinical Nutrition Research Center, University of Alabama at Birmingham
- 2004 Best Paper Award by Science Unbound Foundation, USA.
- Best Paper Award by Zhejiang science and technology commission, 1992.
- National Natural Science Foundation of China Grant "Statistical methods for mapping quantitative trait loci in forest trees", 1998-2000.
- National Natural Science Foundation of China Grant "Construction of genetic linkage map and mapping quantitative trait loci in Chinese Fir and Poplar", 1998-2000.
- National Natural Science Foundation of China Grant "Genetic analysis of forest germplasm resources for important trees species of *Castanopsis* special in China", 1998-2000.

PROFESSIONAL MEMBERSHIPS

- The American Statistical Association, 2005-present.
- The American Society of Human Genetics, 2010-present.

- NAASO, North American Association for the Study of Obesity, 2004-present.
- International Biometric Society, 2000-present.
- International Society for Bayesian Analysis, 2000-present.

JOURNAL EDITORIAL BOARD

- Associate Editor for *Genetics*, 2012 - present
- Associate Editor for *BMC Genetics*, 2009 - present
- Associate Editor for *International Journal of Plant Genomics*, 2009 - present
- Associate Editor for *Journal of Biometrics & Biostatistics*, 2010 – present
- Associate Editor for *Review of Bioinformatics & Biometrics*, 2012 – present
- Associate Editor for *Journal of Applied Bioinformatics & Computational Biology*, 2012 – present
- Review Editor for *Frontiers in Statistical Genetics and Methodology*, 2010- present
- Associate Editor for *Genetics Research*, 2009 – 2012

RESEARCH AREAS/INTERESTS AND ACHIEVEMENTS

My research areas and interests include:

- **Statistical Genetics:** genetic association studies of common and rare variants in human populations, QTL mapping for complex traits in animal and plant experimental crosses, statistical analysis of genetic interactions (gene-gene and gene-environment interactions), predictive and prognostic modeling of complex diseases and traits
- **Statistical Methods for Precision or Personalized Medicine:** applying existing methods and developing hierarchical GLMs and survival models for predicting disease risk or survival using large-scale clinical and molecular profiling data
- **Microbiome/Metagenomics Data Analysis:** applying existing methods and developing hierarchical over-dispersed and zero-inflated models for microbiome association studies and for microbiome-based predictive modeling
- **Bayesian Methods:** Bayesian hierarchical modeling, deterministic and MCMC algorithms, and Bayesian computation software (Stan and WinBUGS)
- **Computer Software Development:** developing R packages for implementing our own and existing statistical methods

- **Genetics and Genomics of Human Diseases:** Obesity, Cancers, etc.

I have developed Bayesian models and Markov chain Monte Carlo (MCMC) algorithms for detecting multiple quantitative trait loci (QTL) and genetic interactions (G x G and G x E) for complex continuous, binary and ordinal phenotypes in experimental crosses. I have also developed various Bayesian hierarchical models (including hierarchical generalized linear models (GLMs), ordinal models, Cox survival models, and zero-inflated (negative binomial, Poisson, Gaussian) models) and fast deterministic algorithms for jointly analyzing numerous clinical, environmental and molecular variables for identifying important predictors and predicting disease outcomes. I have implemented our Bayesian multiple QTL mapping methods in R package *qtlbim* (www.qtlbim.org), and our Bayesian hierarchical methods in R package *BhGLM* (<https://github.com/nyiuab/BhGLM>). I have recently developed hierarchical zero-inflated models and mixed models and R packages (*bmzim* <https://github.com/nyiuab/bmzim>, and *NBZIMM* <https://github.com/nyiuab/NBZIMM>) for analyzing microbiome data.

I have published a number of methodological papers in prestigious journals such as *PLoS Genetics*, *PNAS*, *Genetics*, *Bioinformatics*, *BMC Bioinformatics*, *Genetic Epidemiology*, and *Statistical Applications in Genetics and Molecular Biology*, review papers in *Current Opinion in Genetics & Development*, *Nature Genetics*, and *Genetics Research*, and applied papers in journals such as *International Journal of Obesity*, *Journal of Lipid Research*, *BMC Genomics*, *Critical Care*, *British Journal of Cancer*, and *Molecular Cancer Research*. I have completed two NIH R01 grants as PI, entitled “*Bayesian methods for mapping complex epistatic genes*” and “*Bayesian Methods for Genome-Wide Interacting QTL Mapping*”, respectively, and multiple NIH grants as Co-Investigator or Subcontract PI. I have served as Associate Editor for several journals.

SOFTWARE RELEASES (R PACKAGES)

1. **qtlbim**: QTL Bayesian interval mapping. (B.S. Yandell and **N. Yi**, free release on September 2006 through CRAN) (www.qtlbim.org)

qtlbim is an extensible, interactive environment for the Bayesian Interval Mapping of QTL, built on top of R/qtl (Broman *et al.* 2003), providing Bayesian analysis of multiple interacting quantitative trait loci (QTL) models for continuous, binary and ordinal traits in experimental crosses. It includes several efficient Markov chain Monte Carlo (MCMC) algorithms for evaluating the posterior of genetic architectures, *i.e.* the number and locations of QTL, their main and epistatic effects, and gene-environment interactions. R/qtlbim provides extensive informative graphical and

numerical summaries, and model selection and convergence diagnostics of the MCMC output, illustrated through the vignette, example and demo capabilities of R (R Development Core Team 2006). The package is freely available from cran.r-project.org.

2. **BhGLM**: Bayesian hierarchical GLMs and Survival Models, with application to Genetics and Epidemiology (<https://github.com/nyiuab/BhGLM>)

The R package **BhGLM** provides functions for setting up and fitting various Bayesian hierarchical models (generalized linear models (GLMs), Cox survival models, negative binomial models, and ordered logistic or probit regressions), for numerically and graphically summarizing the fitted models, and for evaluating the predictive performance. Several types of priors on the coefficients can be used: double-exponential, Student-t, mixture double-exponential, and mixture t. The models are fitted by using fast algorithms for estimating posterior modes rather than MCMC. The methods can be used to analyze not only general data but also large-scale genomic data (i.e., detecting disease-associated genes or variants, predictive and prognostic modeling of diseases and traits).

3. **bmzim**: Bayesian Models and Zero-Inflated Models (<https://github.com/nyiuab/bmzim>)

This package provides functions for setting up and fitting various Bayesian zero-inflated and corresponding non zero-inflated models. These Bayesian models can jointly analyze numerous and correlated predictors.

4. **NBZIMM**: Negative Binomial and Zero-Inflated Mixed Models (<https://github.com/nyiuab/NBZIMM>)

This package provides functions for setting up and fitting negative binomial mixed models and zero-inflated negative binomial and Gaussian mixed models. These functions allow for multiple and correlated group-specific (random) effects and various types of within-group correlation structures as described in the core package **nlme**, and return objects that can be summarized by functions in **nlme**. The methods can be used to analyze overdispersed and zero-inflated count or continuous responses with multilevel data structures (for example, clustered data and longitudinal studies).

Deciphering How Esco2 Loss Acts as a Penetrance Modifier
Novel therapies or predictive risk factors are derived from the understanding of the fundamental factors that contribute to tumorigenesis. This proposal aims to provide an unexplored mechanistic understanding of how defects in sister chromatid cohesion can promote tumorigenesis.
Role: Co-investigator

R03DE025642 (Liu) 9/1/16-8/31/18 0.84 cal
NIH/NIDCR
High-Dimensional Statistical Genetic Methods for Dental Caries
The proposed research is relevant to public health because dental caries (also known as tooth decay) and orofacial clefts create tremendous burden for patients, their families, and the whole society. We propose to develop powerful statistical methods to facilitate the identification of novel genetic variants contributing to dental caries and orofacial clefting and the prediction of the risk of them using genome-wide genetic data. The project is closely related to the mission of NIDCR and NIH because the successful completion of this project will eventually lead to better understanding of the etiology, efficient intervention and prevention, and eventually the personalized prevention and treatment strategies of dental caries and orofacial clefts.

A Genetic Model for Early-Onset Breast and Colon Cancer in African AmericansAfrican. This work will formally prove whether or not specific DNA sequences, which are more common in African Americans than in Caucasian Americans, can predispose individuals to early onset breast or colon cancer, regardless of their race. If the hypothesis put forth in this proposal is validated, these results will provide the basis for identifying individuals that are at high risk for developing breast or colon cancer, and justify deploying more aggressive screening guidelines for those harboring high-risk DNA sequences.

TGFBFR1 Signaling in Colorectal Cancer			
Role: Co-investigator			
NIH R01GM077490	(Allison)	9/01/07 - 08/31/11	3.48 cal
NIH/NIGMS			
Genome-wide Structured Association Testing & Regional Admixture Mapping			

Developing, evaluating, and applying enhanced SAT and RAM methods in the context of massive scale genome-wide association studies.

Role: Co-investigator

1R01 DK067487-01A1 (Allison) 01/01/2005 – 12/31/2008 1.8 cal
NIH

Effects of intentional weight loss on mortality rate

This project is to develop statistical methods for studying effects of intentional weight loss on mortality rate.

Role: Co-investigator

R01 HL80812-01 (Maria De Luca) 10/01/2004-09/30/2008 1.8 cal
NIH

QTL mapping age-related changes in lipid storage

This project is to identify QTL for age-related change in lipid storage in *Drosophila*.

Role: Co-investigator

R01 ES012933-01 (Douglas Ruden) 09/24/2004-08/31/2009 0.6 cal
NIH

QTL AND MICROARRAY MAPPING LEAD SENSITIVITY GENES

The major goals of this project are to use QTL mapping microarrays to identify lead sensitivity genes in *Drosophila*

Role: Co-investigator

VA Merit Review (John Mountz) 10/01/04-09/30/09 1.2 cal

Autoantibody Induced Arthritis and Autoimmune Disease in BXD2 Mice

The major goals of this project are to autoantibody induced arthritis and autoimmune disease using BXD2 mice.

Role: Co-investigator

R01 ES09912 (Amos) 7/1/02 – 6/30/07 1.2 cal
NIH

Positional Gene Identification of Complex Traits

This project is to develop statistical methods for mapping genes for complex traits in humans.

Role: Co-Investigator

R01 RR17009-01 (Bullard) 4/1/02 - 3/31/07
NIH

Genetic Mouse Models for Chronic Inflammatory Disease

This project will use the MRL/MpJ-Fas^{lpr} model system to further define the ICAM-1-dependent pathways responsible for mediating vasculitis.

Role: Co-Investigator

RO1 AG11653-08 (Mountz) 02/29/02 - 02/29/07
NIH

Defective Fas Apoptosis During Aging

This study focuses on identification of populations of age-responder (A-R) and age non-responder (A-NR) T cells and apoptosis pathways.

Role: Co-Investigator

R21 ES 11751 (Douglas Ruden) 03/15/02 - 03/14/04

NIEHS

Developmental Toxicology of Lead, Mercury, and Cadmium

The major goals of this project are to use microarrays to identify protective genes induced by *Drosophila* larvae exposed to heavy metals.

Role: Co-Investigator

NIH R01 CA112520 (Pasche) 09/07/05-08/31/09

TGF- β polymorphisms and breast cancer in families

To assess the association between the *TGFBR1**6A and the *TGFBI* T29C variants and familial breast cancer in 5,357 discordant sibling case-control sets for whom DNA and high-quality breast cancer risk factor data are available.

Role: Co-Investigator

NIH R01 CA108741 (Pasche) 02/24/06-01/31/09

TGF- β polymorphisms and colon cancer risk

To assess the association between the *TGFBR1**6A and the *TGFBI* T29C variants and familial colorectal cancer in 4,208 sibling case-control pairs from the NCI-sponsored familial colon cancer registry for whom DNA and high-quality colorectal cancer risk factor data are available.

Role: Co-Investigator

CURRENT TEACHING

- BST 740, Bayesian analysis. University of Alabama at Birmingham, Fall 2004, 2006, 2008, 2010, 2012, 2014, 2016.
- BST 741, Advanced Bayesian Analysis II. University of Alabama at Birmingham, Fall 2011, 2013, 2015.
- BST 760, Generalized Linear/Mixed Models. University of Alabama at Birmingham, Spring 2016.

PREVIOUS TEACHING

- BST 795, Special topics: Advanced Bayesian Analysis. University of Alabama at Birmingham, Fall, 2007, 2009.

- Faculty at the 1st Annual NSF-funded short course on statistical genetics & genomics. July 23, 2008.
- Guest Lecturer for HMG 703 “Quantitative Methods”. University of Alabama at Birmingham, April 2008
- Guest Lecturer for HMG 703 “Quantitative Methods”. University of Alabama at Birmingham, April 2007
- Guest Lecturer for MGE 702 “Advanced Human Genetics”, Statistical Approaches to Genetic Crosses, May 3, 2005.
- Faculty at the 3th Annual NIH-funded Short Course on Statistical Genetics for Obesity and Nutrition Researchers, Birmingham, AL, February 6-9, 2003.
- Quantitative Genetics: Bayesian analysis of QTL mapping in line crosses. University of California, Riverside, January 2001. Organized by Prof. Xu.
- Quantitative Genetics: Bayesian analysis of QTL mapping in complex pedigrees. University of California, Riverside, January 2001. Organized by Prof. Xu.
- Applied Statistics, Population Genetics, Quantitative Genetics, Forest Genetics and Tree Breeding. Nanjing Forestry University, P. R. China, August 1996-June 1998.
- Mathematical statistics, Multivariate statistics. Nanjing Forestry University, P. R. China, August 1988-July 1993.

ADVISING GRADUATE STUDENTS, POST-DOCTORAL FELLOW AND VISITING SCHOLAR:

Visiting Scholar:

2016-02 – 2017-02, Zaixiang Tang, Associate Professor, from Suzhou University, China

2005-08 – 2006-0.8, Shouluan Ding, Associate Professor, from Shandong University, China

Post-doctoral Fellow:

2003 – 2005, Kyoungmi Kim (Co-mentor with Grier Page) – Assistant Professor, UC David

2005 - 2008, Daniel Shriner (Co-mentor with David Allison) – Research Fellow, Center for Research on Genomics and Global Health, NIH

2007 - 2009, Georgina Badu (Co-mentor with David Allison) – Research Associate, Department of

Twin Research and Genetic Epidemiology, King's College London
2008 – 2010, Richard Reynolds (Co-mentor with Lou Bridges) – Assistant Professor, Division of Clinical Immunology and Rheumatology, University of Alabama at Birmingham
2010 – 2012, Ana Vazquez (Co-mentor with David Allison) - Assistant Professor, Department of Biostatistics, University of Alabama at Birmingham
2012 - 2013, Jun Li

Graduate Students:

2003 – 2008, Samprit Banerjee – Assistant, Associate Professor at Division of Biostatistics and Epidemiology, Department of Public Health, Weill Medical College of Cornell University
2008 – 2011, Jun Li – Post-doc fellow at the section on statistical genetics, University of Alabama at Birmingham
2008 – 2013, Tapan Metha – Assistant Professor, University of Alabama at Birmingham
2011 – 2015, Himel Mallick – Postdoc researcher, Harvard University
2013 – 2017, Xinyan Zhang – Assistant Professor, Georgia South University
2013 – 2016, Peng Qu – Engineer, Western Digital, California
2013 – 2016, Qingrui Meng – Biostatistician, Saint Luke's Hospital, Kansas City

MASTER/PHD COMMITTEE CHAIR OR MEMBERSHIP

Samprit Banerjee, PhD dissertation, Bayesian genome-wide QTL mapping for multiple traits, 2008 (Committee Chair)

Jun Li, PhD dissertation, Bayesian Hierarchical Generalized Linear Models for Detecting (Rare) Haplotype-haplotype and Haplotype-environment Interactions in Genetic Association Analysis, 2011 (Committee Chair)

Scott Keith, PhD dissertation, Free-knot splines and bootstrapping for nonlinear modeling in complex samples, 2008

Fenglong Xie, Master dissertation, Are SNPs in FCAR associated with SLE? 2008

Guodong Wu, Master dissertation, Statistical Quantification of Methylation Levels by Next Generation Sequencing, 2010

Guodong Wu, PhD dissertation, Statistical Analysis in Genomic Study, 12-03-2013

Qi Yan, PhD, PhD dissertation, Statistical Methods for Set-Based Association Tests in Genetic Studies, 01-2014

Committee member of Honors Thesis Proposal Committee, Ali Fry, Department of Mathematics, University of Alabama, 12-12-2014

Himel Mallick, PhD dissertation, Some contributions to Bayesian regularization methods with applications to genetics and clinical trials, 05-05-2015 (Committee Chair)

Qingrui Meng, Master dissertation, Survival Prediction with Stratified Cox Proportional Hazards Models of Primary Breast Cancer in African American versus White Women; SEER data 2010-2012, 04-15-2016 (Committee Chair)

Peng Qu, Master dissertation, Analysis of Risk Factors on Obesity/Overweight among Adolescents and Young Adults based on 1999-2012 NHANES Data. 04-18-2016 (Committee Chair)

Amanda L. Hall, Master dissertation, A Comparison of Immune Repertoire Diversity Profiling Techniques in the Descriptive Analysis of Patients Diagnosed with Inflammatory Bowel Disease. 06-08-2016.

Holly Hartman, Master dissertation, A Novel Approach to Analyzing High Throughput ELISA Data in Absence of a Standard. 06-07-2016.

Xinyan Zhang, PhD Proposal, statistical methods in cancer survival prediction and microbiome data analysis. 04-26-2016.

Seth T Lirette, PhD Proposal, Approaching brain perfusion data from a statistical perspective. 08-22-2016.

Fenglong Xie, PhD Proposal, Comparative effectiveness of tocilizumab on risk of cardiovascular disease among patients with rheumatoid arthritis. 08-19-2016.

Yan Li, PhD Proposal, Sample size re-estimation and sample size reallocation procedures in randomized clinical trials with multiple arms. 11-16-2016.

Yogasudha Veturi, PhD Dissertation, Methods for the analysis of genetic differences in ethnicity and sex for complex human traits. 11-18-2016 (Committee Chair)

Xinyan Zhang, PhD Dissertation, Statistical Methods in Cancer Survival Prediction and Microbiome Data Analysis. 03-20-2017 (Committee Chair)

Fuchenhu Wang, Master dissertation, Comparisons of gut microbiota of generally healthy black and white women in the southern United States. 04-14-2017.

Yan Li, PhD Dissertation, Sample size re-estimation and sample size reallocation procedures in randomized clinical trials with multiple arms. 05-2017.

Seth T Lirette, PhD Dissertation, Approaching brain perfusion data from a statistical perspective. 05-2017.

Amanda L. Hall, PhD Dissertation Proposal, Bayesian hierarchical negative binomial and zero-Inflated negative binomial models applied to high-dimensional microbiome data. 05-31-2018.

Allison Fialkowski, PhD Dissertation, Simulation of correlated variables, mixture distributions and repeated measurements, and comparison of pharmacogenetic prediction with machine learning methods. 06-07-2018.

INVITED PRESENTATIONS

- Bayesian analysis of quantitative trait loci for complex traits in complicated mating designs. Pioneer Hi-Bred International, Inc. April 26, 2001.
- Bayesian analysis of quantitative trait loci for complex traits. Department of Biostatistics, the University of Alabama at Birmingham. July 12, 2001.
- Bayesian analysis of quantitative trait loci with epistatic effects. Plant and Animal Genome VIII, San Diego, California, January 2002.
- Mapping epistatic genes for complex traits. The conference "Statistical Integration of Genetic Information Across Data Domains: Biomedical, Agricultural, and Comparative Genomics", University of Alabama, Birmingham, AL. December 2nd, 2002.
- Bayesian Model Selection and Epistasis. Third Annual Short Course on Statistical Genetics for Obesity & Nutrition Researchers. University of Alabama, Birmingham, AL. February 6-9, 2003.
- Epistasis influences complex spontaneous obesity in the BSB model. NAASO 2003 Annual Scientific Meeting. Ft. Lauderdale, FL. October 11-15, 2003.
- The practical implementation of Bayesian model selection for identifying epistatic genes in experimental crosses. Plant and Animal Genome XII, San Diego, California, January 2004.
- Analysis of genome-wide epistasis via Bayesian model selection. Spring meeting of International Biometric Society, Eastern North American Region, Pittsburgh, PA, March 28-31, 2004.
- Bayesian model selection for mapping complex epistatic genes in experimental designs. Complex Trait Consortium, The Jackson Lab, July 6-9, 2004.

- Mapping complex epistatic genes for complex traits in experimental designs. Department of Biostatistics and Epidemiology, Florida International University, Feb 11, 2005.
- Mapping complex epistatic genes for obesity in experimental designs. Department of Nutrition, University of Alabama at Birmingham, March 15, 2005.
- Genetic Architecture of the Developmental Trajectory for Body Weight in a Cross of High Growth and Wild Strains of Mice. NAASO 2005 Annual Scientific Meeting. Vancouver, British Columbia, Canada. October 15-19, 2005.
- Bayesian Model selection for mapping interacting QTL. SCMA 2005 / FIM XII. Auburn University, Auburn, AL. December 3-4, 2005.
- Genome-wide interacting QTL analysis for complex traits in experimental crosses. Department of Biochemistry and Microbiology, Marshall University, December 2005.
- Efficient MCMC algorithms for mapping genome-wide interacting QTL. Spring meeting of International Biometric Society, Eastern North American Region, Tampa, FL, March 26-29, 2006.
- Bayesian multiple QTL analysis. Yangzhou University, China. June 26, 2006.
- Bayesian multiple QTL analysis. Nanjing Agricultural University, China. June 29, 2006.
- Bayesian multiple QTL analysis. Nanjing Forest University, China. July 3, 2006.
- Bayesian multiple QTL analysis. Shanghai Jiaotong University, China. July 29, 2006.
- Genome-wide interacting QTL analysis for obesity in experimental crosses. Monell Chemical Senses Center, Philadelphia. October 3, 2006.
- Bayesian multiple interacting QTL analysis. Department of Statistics and Bioinformatics Research Center, NCSU, Raleigh NC. March 29-30, 2007.
- Recent advances in Bayesian multiple QTL analysis. Lunch & Med Stat Seminar CCC Biostat & Bioinfo Unit & SOPH Biostat Dep, UAB. Feb 11, 2008.
- Large-scale hierarchical generalized linear models for interacting QTL mapping. Spring meeting of International Biometric Society, Eastern North American Region, Arlington, Virginia, March 16-19, 2008.
- Bayesian hierarchical generalized linear models for interacting QTL mapping. 1st Annual NSF-funded short course on statistical genetics & genomics. July 23, 2008.

- Hierarchical generalized linear models for multiple-SNP analysis. JSM Washington DC. Aug 2009.
- Detecting and characterizing multiple interacting genes in cancer case-control studies. 13th annual research retreat. UAB comprehensive cancer center. October 28, 2009.
- Statistical methods for finding the missing heritability of complex diseases. Genetics and Genomics Seminar Series, UAB school of medicine. Oct 8th, 2010.
- Hierarchical generalized linear models for finding the missing heritability of complex diseases/traits. Nanjing Agricultural University, China. July, 2011.
- Hierarchical generalized linear models for finding the missing heritability of complex diseases/traits. Yangzhou University, China. July, 2011.
- Hierarchical generalized linear models for finding the missing heritability of complex diseases/traits. Nanjing Forest University, China. July, 2011.
- Hierarchical GLMs for multiple groups of rare and common genetic variants. International Conference of Biometrics & Biostatistics, Omaha, NE. March 2012.
- Bayesian hierarchical GLMs, with application to genetic data analysis. Guangzhou University, China. June 2013.
- Bayesian hierarchical GLMs for genetic association studies. University of North Carolina at Chapel Hill. October 2, 2013.
- Hierarchical models for post-GWAS. Nanjing Agricultural University, China. July, 2014.
- Bayesian hierarchical generalized linear models (BhGLM) for genetic data analysis. Nanjing Agricultural University, China. July, 2014.
- Hierarchical models for post-GWAS. Suzhou University, China. August, 2014.
- Bayesian hierarchical GLMs for genetic association studies. Department of Mathematics, University of Alabama at Birmingham. November 21, 2014.
- Bayesian Methods for Incorporating Biological Information into Prognostic and Predictive Modeling. Soochow University, China. Jan 15, 2015.
- Bayesian Data Analysis. Soochow University, China. Jan 2015.
- LeClerg Rotary Lecture: Bayesian hierarchical GLMs for genetic association studies. University of Maryland, April 8, 2015.

- LeClerg Rotary Lecture: GLMs, hierarchical GLMs, R package BhGLM. University of Maryland, April 9, 2015.
- Statistical Methods for Precision medicine. Soochow University, China. June 24 – July 5, 2015.
- Bayesian hierarchical models for prognostic prediction using large-scale molecular data. ICISA, Shanghai, China. July 7, 2015.
- Bayesian hierarchical models for high-dimensional molecular data. Yangzhou University, China. December 21, 2015.
- Bayesian statistical methods for prognostic prediction of diseases using clinical and molecular data. Suzhou University, China. December 25-29, 2015.
- Penalized and Hierarchical Models for Prognostic Prediction Using Molecular Data. Fudan University, China. December 31, 2015.
- Statistical methods for microbiome data analysis. The Samuel Roberts Noble Foundation, Ardmore, OK. April 29, 2016.
- Bayesian hierarchical models with application to genomics and epidemiology. 3rd Short Course R25DK099080 The Mathematical Sciences in Obesity. June 13-17, 2016. University of Alabama at Birmingham.
- Statistical methods for microbiome data analysis. Suzhou University, China. July 02, 2016.
- Statistical methods for high-dimensional data and precision medicine. Soochow University, China. Aug 04 – 06, 2016.
- Data analysis for correlated and complex microbiome experiments. University of Alabama at Birmingham. September 14, 2016.
- Statistical methods for microbiome data analysis. NHGRI Short Course, University of Alabama at Birmingham. December 14, 2016.
- Hierarchical Models for Predicting Disease Outcomes and Detecting Associated Factors Using Large-Scale Clinical and Molecular Data. Department of Bioinformatics and Genomics, UNC-Charlotte. February 17, 2017.
- Clinical Prediction Models - Concepts, Methods and Implementations. Soochow University, China. July 05 – 07, 2017.
- Hierarchical Models for Complex Molecular Data Analysis. Bioinformatics Institute, University of Alabama at Birmingham. December 15, 2017.

- Bayesian Data Analysis, with Applications to Genomics and Epidemiology. Soochow University, China. January 03, 2018.
- Hierarchical Models for Microbiome Data Analysis. Suzhou, China. June 14-17, 2018.
- Introduction to Bayesian Inference. Suzhou University, China. July 13, 2018.

PEER REVIEW ACTIVITIES

Referee for Journals:

Genetics, American Journal of Human Genetics, Genetics Research, Genetica, Heredity, Trends in genetics, Human Heredity, Bioinformatics, Obesity Reviews, Genetics Selection Evolution, Genes and Immunity, BMC genomics, BMC Medical Genetics, Mammalian Genome, PLoS Genetics, PLoS One, Theoretical and Applied Genetics, Nature Genetics, Journal of the Royal Statistical Society, Annals of Human Genetics, BMC Genetics, Journal of Heredity, Computational Statistics and Data Analysis, Annals of Applied Statistics, Biometrics, JAMA, Genetic Epidemiology, Journal of Biopharmaceutical Statistics

Book review:

Springer (2006, 2007, 2008)

SAGE (2009)

NIH STUDY SECTION AND REVIEW OF GRANT PROPOSALS

- Genetic Variation and Evolution Study Section, NIH (July 2005)
- GCAT Study Section, NIH (March 2-3 2006)
