EDUCATION AND TRAINING

- 2001–2004, Postdoctoral training. Statistical Genetics, The Jackson Laboratory, Bar Harbor, ME (with Dr. Gary Churchill).
- 1994–2001, Ph.D. Genetics, Iowa State University, Ames, IA (with Dr. Patrick Schnable).
- 1991–1994, M.S. Molecular and Cytogenetics, Nankai University, Tianjin, P. R. China.
- 1987–1991, B.A. Biology, Nankai University, Tianjin, P. R. China.

RESEARCH EXPERIENCE

- 2012– Present Associate Professor (non-tenure track), Department of Biostatistics, University of Alabama at Birmingham, Birmingham, AL.
- 2004–2012 Assistant Professor (non-tenure track), Department of Biostatistics, University of Alabama at Birmingham, Birmingham, AL.
- 2004–2009 Assistant Professor (non-tenure track), Department of Medicine, Division of Genetic and Translational Medicine (later merged into Department of Genetics), University of Alabama at Birmingham, Birmingham, AL.
- 2001–2004 Postdoctoral associate, The Jackson Laboratory, Bar Harbor, ME.
- 1994–2001 Graduate Research Assistant, Iowa State University, Ames, IA.
- 1991–1994 Graduate Research Assistant, Nankai University, Tianjin, China.

QTL and Microarray Mapping Lead Sensitivity Genes

The hypothesis for this proposal is that one can identify some of the "protective genes" that make an organism resistant to the behavioral and developmental effects of lead toxicity using quantitative trait loci (QTL) mapping techniques combined with microarray and sophisticated genetic analyses.

Genetic Modifiers of Recessive Polycystic Kidney Disease: Implications for Pathogenesis and Therapeutics

The specific aims of this project are: (1) to map QTL that modulate *cpk* renal cystic disease and those QTL that unmask and modulate the biliary phenotype in the mouse *cpk* model, (2) to determine whether these same QTL modulate *bpk*-associated renal and biliary traits, and 3) to test patients enrolled in our ARPKD Clinical Database to determine whether the human homologues of these renal and biliary QTL modulate disease expression in human ARPKD.

Modulation of Innate Immunity in Lung Transplantation

The major goal of this project is to identify differences in the ability of *Ams* to kill gram-positive and gram-negative bacterial pathogens in lung-transplant patients.
